

Overview of EMS, ISO 9000 and Other ISO Standards

Dr. Fatema-Tuj-Zohra
Assistant Professor
Institute of Leather Engineering and Technology
University of Dhaka

ISO 9001

- ISO 9001 is the international standard that specifies requirements for a quality management system (QMS).
- Organization use the standard to demonstrate the ability to consistently provide products and services that meet customer and regulatory requirements.
- It is the most popular standard in the ISO 9000 series and the only standard in the series to which any organizations can certify.

ISO 9001

- ISO 9001 was first published in 1987 by the International Organization for Standardization (ISO), an international agency composed of the national standards bodies of more than 160 countries.
- The current version of ISO 9001 was released in May 2026.

ISO 9001

- ISO 9001:2026 applies to any organization, regardless of size or industry. More than one million organizations from more than 160 countries have applied the ISO 9001 standard requirements to their quality management systems.
- Organizations of all types and sizes find that using the ISO 9001 standard helps them:
 - Organize processes
 - Improve the efficiency of processes
 - Continually improve

What topics does ISO 9001 cover?

- ISO 9001 is based on the plan-do-check-act methodology and provides a process oriented approach to documenting and reviewing the structure, responsibilities, and procedures required to achieve effective quality management in an organization. Specific sections of the standard contain information on topics such as:
- Requirements for a quality **management** system, including documented information, planning and determining process interactions
- Responsibilities of management
- Management of resources, including human resources and an organization's work environment
- Product realization, including the steps from design to delivery
- Measurement, analysis, and improvement of the QMS through activities like internal audits and corrective and preventive action

ISO 9000 series

- **ISO 9000 series Quality Management Principles**
- The ISO 9000 series are based on seven quality management principles (QMP)^[32]
- The seven quality management principles are:
 - QMP 1 – Customer focus
 - QMP 2 – Leadership
 - QMP 3 – Engagement of people
 - QMP 4 – Process approach
 - QMP 5 – Improvement
 - QMP 6 – Evidence-based decision making
 - QMP 7 – Relationship management

ISO 9000 Principle

Principle 1 – Customer focus

Organizations depend on their customers and therefore should understand current and future customer needs, should meet customer requirements and strive to exceed customer expectations.

Principle 2 – Leadership

Leaders establish unity of purpose and direction of the organization. They should create and maintain the internal environment in which people can become fully involved in achieving the organization's objectives.

Principle 3 – Engagement of people

People at all levels are the essence of an organization and their full involvement enables their abilities to be used for the organization's benefit.

Principle 4 – Process approach

A desired result is achieved more efficiently when activities and related resources are managed as a process.

ISO 9000 Principle

Principle 5 – Improvement

Improvement of the organization's overall performance should be a permanent objective of the organization.

Principle 6 – Evidence-based decision making

Effective decisions are based on the analysis of data and information.

Principle 7 – Relationship management

An organization and its external providers (suppliers, contractors, service providers) are interdependent and a mutually beneficial relationship enhances the ability of both to create value.

The ISO 9001 Requirements has the following clauses

Introduction to ISO 9001 Requirements

1 Scope

1.1 General

1.2 Application

2 Normative references

3 Terms and definitions

4 Quality management system

4.1 General requirements

4.2 Documentation requirements

4.2.1 General

4.2.2 Quality manual

4.2.3 Control of documents

4.2.4 Control of records

The ISO 9001 Requirements has the following clauses

- **5 Management responsibility**
 - 5.1 Management commitment**
 - 5.2 Customer focus**
 - 5.3 Quality policy**
 - 5.4 Planning**
 - 5.4.1 Quality objectives**
 - 5.4.2 Quality management system planning**
 - 5.5 Responsibility, authority and communication**
 - 5.5.1 Responsibility and authority**
 - 5.5.2 Management representative**
 - 5.5.3 Internal communication**
 - 5.6 Management review**
 - 5.6.1 General**
 - 5.6.2 Review input**
 - 5.6.3 Review output**
- **6 Resource management**
 - 6.1 Provision of resources**
 - 6.2 Human resources**
 - 6.2.1 General**
 - 6.2.2 Competence, training and awareness**
 - 6.3 Infrastructure**
 - 6.4 Work environment**

The ISO 9001 Requirements has the following clauses

- **7 Product realization**

- 7.1 Planning of product realization**

- 7.2 Customer-related processes**

- 7.2.1 Determination of requirements related to the product**

- 7.2.2 Review of requirements related to the product**

- 7.2.3 Customer communication**

- 7.3 Design and development**

- 7.3.1 Design and development planning**

- 7.3.2 Design and development inputs**

- 7.3.3 Design and development outputs**

- 7.3.4 Design and development review**

- 7.3.5 Design and development verification**

- 7.3.6 Design and development validation**

- 7.3.7 Control of design and development changes**

- 7.4 Purchasing**

- 7.4.1 Purchasing process**

- 7.4.2 Purchasing information**

- 7.4.3 Verification of purchased product**

- 7.5 Production and service provision**

- 7.5.1 Control of production and service provision**

- 7.5.2 Validation of processes for production and service provision**

- 7.5.3 Identification and traceability**

- 7.5.4 Customer property**

- 7.5.5 Preservation of product**

- 7.6 Control of monitoring and measuring equipment**

The ISO 9001 Requirements has the following clauses

- **8 Measurement, analysis and improvement**
 - 8.1 General**
 - 8.2 Monitoring and measurement**
 - 8.2.1 Customer satisfaction**
 - 8.2.2 Internal audit**
 - 8.2.3 Monitoring and measurement of processes**
 - 8.2.4 Monitoring and measurement of product**
 - 8.3 Control of nonconforming product**
 - 8.4 Analysis of data**
 - 8.5 Improvement**
 - 8.5.1 Continual improvement**
 - 8.5.2 Corrective action**
 - 8.5.3 Preventive action**

What is ISO?

- International Organization for Standardization - "ISO" is a word, derived from the Greek isos, meaning "equal."
- From "equal" to "standard"-- line of thinking that led to the choice of "ISO" as the organization's name.

International Organization for Standardization (ISO)

- Worldwide federation of national standards bodies from over 100 countries, one representative from each country.
- Non-governmental organization (NGO) established in 1947, located in Switzerland.
- American National Standards Institute (ANSI) is US representative to ISO

Review May 2026

- Ethics & Quality Culture – Leadership accountability will go beyond processes to building a culture of integrity & trust.
 - ✓ Risk & Opportunity Clarity – Stronger guidance to separate and manage both effectively.
 - ✓ Climate Change & Stakeholder Focus – Organizations will need to integrate sustainability & environmental risks in their QMS.
 - ✓ Digital Transformation – Recognition of AI, IoT, and Industry 4.0 in quality systems.
 - ✓ Alignment with Other Standards – Easier integration with ISO 14001, ISO 27001 & ISO 45001.

Audit Checklist

For Clause 6.1:

- 1) How are resource needs identified and provided, for all areas of the quality management system?
- 2) Are resources determined and provided for implementing, maintaining and improving the processes of the quality management system?
- 3) Are resources determined and provided for enhancing customer satisfaction by meeting customer requirements?
- 4) Are resources directed towards improving the effectiveness of the quality management system? How? (Obtain examples)
- 5) How have resources been provided to “enhance” Customer satisfaction levels? (Obtain examples)
- 6) Keep in mind that to audit Clause 6.1 you need an overall perspective of the entire QMS in order to make an informed assessment here.

For Clause 6.2:

- 1) Are personnel assigned responsibilities defined in the QMS competent on the basis of applicable education, training, skills/qualifications and experience?
- 2) Are competency needs for personnel performing activities affecting quality identified?
- 3) Are training provided to satisfy the competency needs?
Is effectiveness of training provided evaluated?
- 4) Are appropriate records of education, experience, skills/qualifications and training maintained?
- 5) How do you ensure that a person is competent in their job? How is this checked? How often does this check occur?
- 6) How are competency gaps identified? How are gaps closed?
- 7) How do you know that the action that was taken actually closed the gap?
- 8) How are employees advised on how they can individually contribute to achieving any of the Quality Objectives?

For Clause 6.3:

- 1) How does the organization identify a need to add to the current infrastructure? (i.e. new buildings or additions, new or replacement process hardware or software, enhanced support services such as new or upgraded information technology)
- 2) Is there a capital expenditure budget process? What has been done to the infrastructure in the past 12 months? Once the proper infrastructure is in place, how is it maintained?
- 3) Any Customers orders being affected by lack of a proper infrastructure?

For Clause 6.4:

- 1) How are employees provided with a suitable work environment for supplying the products and services being offered by the company?
- 2) Are work areas properly controlled for lighting and climate conditions?
- 3) Are work areas organized and provide safe working conditions?

Steps in the preparation and implementation of ISO 9001

Sl. No.	Activities	Generally Responsible
01	Management commitment	CEO / Board of Directors
02	Formation of core group(in large, multi-division, multi- location.	CEO
03	Quality policy.	CEO
04	Appointment of management representative.	CEO
05	Training of MR	Training agency
o6	Awareness program for all employees.	MR/ Dept. head/ Consultant

Steps in the preparation and implementation of ISO9001

Sl. No.	Activities	Generally Responsible
07	Set quality objectives for the company and all the functional area.	MR/ CEO /Dept, Head
08	Prepare a list of documentation and procedure for writing procedures.	MR
09	Form an implementation team and delegate for writing documentation.	CEO/ MR
10	Mapping existing process/ writing methods/ work methods/ instructions/ checklists.	Dept. head/ key personnel
11	Comparison with the applicable ISO standard and identifying gaps.	Dept. head/ key personnel/ consultant
12	Writing additional methods/ work methods/ instructions/ checklists to fill the gaps	Dept. head/ key personnel

Steps in the preparation and implementation of ISO9001

Sl. No.	Activities	Generally Responsible
13	Apex quality manual	MR, Consultant.
14	Compile linkages among procedures.	MR
15	Regular review of progress.	MR with core group
16	Check adequacy for certification with respect to the standard.	MR/ Dept. head
17	Identify certification agency	MR/ Consultant if required
18	Request for certification, submit quality manual for review.	MR
19	Training for quality audit	MR/ consultant

Steps in the preparation and implementation of ISO9001

Sl. No.	Activities	Generally Responsible
20	1 st internal audit	MR/ IQ auditors, consultant
21	1 st MRM	CEO, MR, Dept. head and internal auditor
22	Take planed corrective and preventive action.	All dept. head and MR
23	2 nd IQA	MR and IQ auditor
24	2 nd MRM	CEO, MR, Dept. head and internal auditor
25	Follow up or compliance audit to check completion of corrective action effectively.	MR, Dept. head and internal auditor
26	Preliminary assessment	Accredited certification agency
27	Final assessment for certification	Accredited certification agency

What is ISO 14000

- The designation "ISO 14000" is a general term referring to a family of standards concerned with "environmental management".
- This refers to what the organization does to:
 - Minimize harmful effects on the environment caused by its activities, and to
 - Achieve continual improvement of its environmental performance.
- It is applicable to any business or organization, regardless, of size, location or income.

ISO 14000 Family

- A series of guidance documents and standards to help organizations address environmental issues.
 - 14001: Environmental Management Systems
 - 14004: EMS general guidelines
 - 14010: Guidelines for Environmental Auditing
 - 14011: Guidelines for Auditing of an EMS
 - 14012: Auditing - Qualification criteria
 - 14020: Environmental Labeling
 - 14030: Env. Performance Evaluation (EPE)
 - 14040: Life-Cycle Assessment (LCA)

ISO 14000 Standards Family

- **Management System standards**
- **EMS, auditing, EPE (14030)** In the context of international standards and corporate management, **EPE (14030)** refers to **Environmental Performance Evaluation** under the ISO 14000 series. Specifically, **ISO 14030** dictates the methodologies, definitions, and indicator tracking structures required for organizations to formally evaluate and verify their internal environmental impacts and green investments.
- **Product standards**
 - **LCA (14040), labeling (14020)**

Environmental Management System (EMS)

- ISO 14001 is the specification standard that is a model for an environmental management system.
- ISO 14004 is the guidance for the EMS specification
- 14001 is the only specification standard in the ISO series.

Becoming ISO 14001 certified

- Registration body examines EMS for conformity to the ISO 14001 standard
- Not a compliance audit, an EMS audit
- Facility awarded registration
- Does NOT mean that products are more environmentally friendly
- Does mean have a documented EMS that is fully implemented and consistently followed

To Whom Do the Standards Apply?

- Standard is Voluntary
- Large and Small Businesses & Industry
- Service Sectors (hospitals, hotels, etc.)
- City and Country Government
- Applicable to all types of organizations, of all sizes anywhere in the world

What is an EMS?

- Systematic way of managing an organization's environmental affairs
- Based on Plan-Do-Check-Act Model (PDCA)
- Focused on **Continual Improvement** of System
- Addresses immediate and long-term impact of an organization's products, services and processes on the environment.
- *A tool to improve environmental performance*

EMS

- Focus not only on what but also why
- Top management priority
- Dynamic
- Flexible, simple
- Employee involvement
- Endorses continual improvement

EMS

- Much of an EMS may already be in place
- Key is to use a systematic approach to planning, controlling and improving environmental efforts
- Can be a vehicle for positive change

17 Requirements in ISO 14001

Env. Policy 4.2	Document control 4.4.5
Env. Aspects 4.3.1	Operational control 4.4.6
Legal and other req. 4.3.2	Emergency preparedness and response 4.4.7
Obj. and targets 4.3.3	Monitoring and measurement 4.5.1
Env. Mgmt. Program 4.3.4	Corrective/preventive action 4.5.2
Structure and Responsibility 4.4.1	Records 4.5.3
Training, awareness, and competence 4.4.2	EMS audit 4.5.4
Communication 4.4.3	Management Review 4.6
EMS documentation 4.4.4	

EMS Model

EMS Key Elements

- Policy Statement/Commitment
- Identification of Significant Environmental Impacts
- Development of Objectives and Targets
- Implementation Plan to Meet Obj. and Targets
- Checking and Follow-up
- Training
- Management Review

How to Audit an Environmental Management System?

Design each EMS audit to fit that company's specific legal requirements and environmental interactions. Work closely with each company's team and provide clear, honest communication from the very beginning of the process.

The purview of environmental management system auditing is broad, covering areas like:

- ❖ Drinking water
- ❖ Storm water
- ❖ Wastewater
- ❖ Waste disposal
- ❖ Storage and disposal of hazardous chemicals
- ❖ Tanks, both above ground and underground
- ❖ Air emissions
- ❖ Emergency response plans

EMS auditing can include the review of documents and topics such as:

- The presence of a written EMS manual
- Organizational charts and position descriptions
- Corporate environmental procedures and policies
- Training requirements
- External and internal communication plans
- Operational and maintenance budgets
- EMS internal verification procedures

The internal audit of an environmental management system straightforward and easy to understand.

ISO 10000 series

- The **ISO 10000 series** is a collection of international standards and guidelines created by the International Organization for Standardization.
- It focuses on managing customer satisfaction, handling complaints, resolving disputes, and providing supportive guidance for quality management systems

ISO 10000 series

ISO 10001: Guidelines for customer satisfaction codes of conduct.

ISO 10002: Guidelines for complaint handling within organizations.

ISO 10003: Guidelines for external dispute resolution for consumer complaints.

ISO 10004: Guidelines for monitoring and measuring customer satisfaction.

ISO 10005: Guidelines for quality plans.

ISO 10006: Quality Management Systems – Guidelines for Quality Management in
Projects

ISO 10007: **Quality** Management Systems – Guidelines for Configuration Management

ISO 10008: Quality Management – Customer Satisfaction – Guidelines for Business-to-Consumer Electronic Commerce Transactions

ISO 10000 series

ISO 10012: Measurement Management Systems – Requirements for Measurement Processes and measuring equipment

ISO 10013: Guidelines for Quality management systems – Guidance for documented information

ISO 10014: Quality Management – Guidelines for Realizing Financial and Economic Benefits

ISO 10015: Quality Management – Guidelines for competence management and people development Training

ISO 10017: Guidance on Statistical Techniques for ISO 9001

ISO 10018: Quality Management – Guidelines on People Involvement and Competence

ISO 10019: Guidelines for the Selection of Quality Management System Consultants and Use of Their Services

ISO 45001

- ISO 45001 is an international standard that specifies requirements for an **occupational health and safety (OH&S) management system**. It provides a framework for organizations to manage risks and improve OH&S performance.
- The standard establishes criteria for an OH&S policy, objectives, planning, implementation, operation, auditing and review. Key elements include leadership commitment, worker participation, hazard identification and risk assessment, legal and regulatory compliance, emergency planning, incident investigation and continual improvement.
- ISO 45001 utilizes the Plan-Do-Check-Act methodology to systematically manage health and safety risks. It applies to organizations of all sizes and can be integrated with other ISO management system standards.

ISO 45001

- Why is ISO 45001 important?
- Implementing ISO 45001 provides **significant value to organizations looking to reduce workplace incidents and demonstrate OH&S commitment**. Benefits include:
- ISO 45001 provides an **internationally-recognized** framework for managing occupational health and safety risks. It enables organizations to **systematically assess hazards and implement risk control measures**, leading to reduced workplace injuries, illnesses and incidents.
- Adopting the standard shows employees and external stakeholders that the organization is committed to worker health, safety and wellbeing. This **boosts reputation, morale and retention**.
- The standard requires complying **risk management**, potentially lowering insurance permit OH&S regulations, ensuring legal conformity. It also promotes **proactive** iums.

ISO 45001

- By requiring emergency preparedness and response protocols, ISO 45001 **strengthens organizational resilience** against safety threats and crises.
- The framework of plan, do, check act means the OH&S system can continually improve and evolve, **enhancing long-term worker health and safety performance**.
- In summary, ISO 45001 enables organizations to **better protect their workers and manage OH&S risks**, making it an essential standard worldwide.

ISO 45001

❖ Benefits

- ❖ Framework to **systematically manage** OH&S risks
- ❖ **Reduced** workplace incidents and injuries
- ❖ **Demonstrated commitment** to worker health and safety
- ❖ **Ensured compliance** with OH&S regulations
- ❖ Increased **organizational resilience**
- ❖ **Continual improvement** of OH&S performance

ISO/IEC 27001

- **ISO/IEC** (International Electrotechnical Commission) **27001**: Secures information assets through an Information Security Management System (ISMS).
- It sets out a risk-based framework that any organisation can use to establish, implement, operate, monitor, review, maintain and continually improve an approach to securing corporate information known as an ISMS (information security management system).

ISO/IEC 27001

- **What ISO 27001 covers**
- ISO 27001 covers the requirements for an ISMS, from scoping to continual improvement. These include:
- Understanding your organisation, its context and the needs and expectations of interested parties.
- Determining the scope of the ISMS.
- Establishing leadership and commitment from top management.
- Establishing an information security policy.

ISO/IEC 27001

- Assigning organisational roles, responsibilities and authorities.
- Information security risk management.
- Establishing information security objectives and planning to achieve them.
- Training and staff awareness.
- Operational planning and control.
- ISMS monitoring, measurement, analysis and evaluation.
- Internal audit.
- Management review.
- Continual improvement.

ISO Standard

- **ISO 22000:** Ensures food safety across all steps of the food supply chain.
- **ISO 13485:** Outlines quality management requirements specifically for medical devices.
- **ISO 50001:** Helps companies to manage energy performance and improve energy efficiency

The Leather Working Group (LWG)

The **Leather Working Group (LWG) certification** is a global environmental audit standard for the leather supply chain.

It measures a facility's performance in energy use, water consumption, chemical management, waste, and worker health and safety. Facilities earn Gold (85%+), Silver (75%+), Bronze (65%+), or Audited (50%+) ratings.

Key Audit Sections Evaluated

- **Environmental Management:** Systems, policies, and continuous monitoring.
- **Water & Energy:** Usage, reduction targets, and efficiency metrics.
- **Chemical Management:** Restricted substances and safe handling.
- **Traceability:** Sourcing transparency back to raw animal hides.
- **Waste & Emissions:** Management of solid waste, wastewater treatment, and air emissions.
- **Health & Safety:** Workplace conditions and safety protocols for workers.
- **Corporate Social Responsibility:** Labor practices and social audits

LWG

Certification Standards and Ranks

- **Standards Available:** Leather Manufacturer, Leather Trader, Commissioning Manufacturer, and Subcontractor standards.
- **Medal Levels:**
 - **Gold:** Score of 85% or higher
 - **Silver:** Score of 75% to 84%
 - **Bronze:** Score of 65% to 74%
 - **Audited:** Score of 50% to 64% (meets minimum requirements)
- **Validity:** Standard certifications remain valid for 24 months before a re-audit is required.

LWG (Leather Working Group) Certification

The Leather Working Group (LWG) provides a framework for environmental and social responsibility in the leather industry through its audit standards and certification program. The LWG certification process assesses leather manufacturers, traders, subcontractors, and commissioning manufacturers against its standards, focusing on areas like environmental management, chemical management, energy and water usage, and social responsibility.

Here's a breakdown of the LWG certification process:

1. Understanding the Standards:

- The LWG has four audit standards that address different parts of the leather supply chain, from raw material traders to finished product traders.
- The Leather Manufacturer Audit Protocol is the most common and applies to tanneries.
- The standards are constantly evolving with input from stakeholders, including brands, leather manufacturers, and industry suppliers.

2. Eligibility and Preparation:

- Any company involved in the production or trading of leather material can be eligible for LWG certification.
- Companies can assess their readiness by taking the Tannery of the Future survey, which mirrors the Leather Manufacturer Standard.
- This survey helps identify areas for improvement before an official audit.

3. Audit Process:

- Companies need to engage with a third-party LWG Approved Auditor to schedule and conduct the audit.
- The audit assesses the company's performance against the chosen LWG standard.
- The audit covers various aspects, including environmental management, chemical management, waste management, energy and water usage, and social responsibility.

4. Certification and Re-audits:

- If the audit results meet the LWG requirements, the facility receives a certificate.
- The initial audit results are valid for 24 months.
- Re-audits are required before the expiry date to maintain certification and membership in the LWG.
- Failure to re-audit before the expiry date results in the removal of the facility's listing on the LWG website.

5. Social Responsibility:

- LWG incorporates social responsibility requirements, including promoting safe working environments and protecting workers.
- A social audit, conducted by a recognized LWG auditor, is part of the certification process.
- The LWG aims to make social responsibility a more critical part of the certification in the future.

6. Traceability:

- The LWG also emphasizes traceability within the leather supply chain to understand the product's journey from origin to store.
- This helps address issues related to animal welfare, environmental and social impacts, and deforestation.

The Leather Working Group (LWG) audit checklist is a comprehensive assessment tool used to evaluate leather manufacturers' environmental performance and compliance with various standards. The audit focuses on key areas like water and energy usage, chemical management, waste and effluent treatment, and health and safety.

Key Areas Covered by the LWG Audit Checklist:

- **Water and Energy Usage:**

Assesses the efficiency of water and energy consumption within the manufacturing process.

- **Environmental Management:**

Evaluates the overall environmental management systems in place at the facility, including environmental policies and procedures.

- **Chemical Management:**

Examines the use of chemicals, including the handling and storage of chemicals, and the management of chemical waste.

Waste Management and Effluent Treatment:

Focuses on the proper management of all types of waste, including solid waste, liquid waste, and hazardous waste.

- **Health and Safety:**

Assesses the workplace environment and ensures compliance with health and safety regulations.

- **Other Important Aspects:**

- **Traceability:** Ensures that the origin and journey of hides and skins can be traced throughout the supply chain.

- **Air and Noise Emissions:** Evaluates the impact of emissions from the tannery on the surrounding environment.

- **Social Responsibility:** Recognizes the importance of fair labor practices and working conditions.

How is the LWG Audit scored?

The audit is a complex assessment that takes account of multiple factors, but in summary, companies are awarded a rating in each section against a minimum threshold score

85% for Gold,

75% for Silver

65% for Bronze

50% for Audited

To achieve its final reported medal rating a manufacturer must achieve that rating across all categories, otherwise it is certified at the level of the lowest category. For example, a manufacturer that achieves gold certification will have achieved Gold in each scored section, if a manufacturer has achieved a mix of ratings across bronze, silver and gold, its final certification will be Bronze.

Companies that do not meet the minimum threshold requirements will not pass the audit. Validity of the certificate is 24 month

Benefits of LWG Certification

- Better price of product
- Lower energy use
- Lower risk of industrial accidents
- Higher productivity and workers' morale
- Better brand image
- Better shareholder relations
- Better operational management
- Incentives, awards and recognition from the government
- Diverse product markets and partners
- Higher job attraction
- Greater access to credit support

Audit Scope for Leather Manufacture:

Code	Category
A	Raw hide/skin to tanned
B	Raw hide/skin to crust
C	Raw hide/skin to finished leather
D	Tanned hide/skin to finished leather
E	Crust hide/skin to finished leather
F	Tanned hide/skin to crust leather
G	Raw hide/skin to pickled/pre-tanned material

It covers 17 separate sections and certification is valid for two years.

- General Facility Details
- Subcontracted Operations
- Social Audit
- Operating Permits
- Production Data
- Incoming Material Traceability
- Outgoing Material Traceability
- Environment Management Systems (EMS)
- Restricted Substances, Compliance, and Chromium VI (CrVI) Management
- Energy Consumption
- Water Usage
- Air & Noise Emissions
- Waste Management
- Effluent Treatment
- Health, Safety, & Emergency Preparedness
- Chemical Management
- Operations Management

Thank You
